Time: 3 hours

MACHINE LEARNING
(Electronics and Communication Engineering)

Max. Marks: 75

Answer any Five Questions

All Questions Carry Equal Marks

AG 1.a) How can a machine learn chess playing? Justify your answer with suitable design.
b) What is the influence of statistics and psychology on machine learning domain? [8+7] A

2.a) Explain the limitations of FIND-S algorithm.
b) Illustrate the importance of entropy and information gain in decision tree induction. [7+8]

3.a) When are neural networks considered in machine learning? Discuss the suitable applications to support your answer.
b) Explain error gradient for a Sigmoid unit. [7+8] A

4.a) How to compare two learning methods? Explain with illustrations.
b) Make a comparison of brute-force MAP learner with candidate elimination algorithm. [8+7]

5.a) What general laws constrain inductive learning?
b) Define VC dimension of a hypothesis space.

c) When does k-nearest neighbor approach Bayes optimal? Give an example. [5+5+5] A

6.a) Explain genetic algorithm as an evolutionary computing approach.
b) Demonstrate Web page classification using first order rules. [8+7]

7.a) Describe an algorithm to learn from perfect domain theories.
b) What is the need of combining inductive and analytical learning? Explain with an example. [8+7] A

8. Explain suitable learning approaches for hand written character recognition and compare their merits and demerits. [15] A
